17.5	24.27	0.956	12.135	0.478	76.25	3

Ring Shank Cutting Example

To determine how long to cut a piece of shanking material to make a ring, Add the circumference, (Total Length of the piece needed) PLUS **TWICE** the thickness of the material you are working with. For example, If you want a **SIZE 8** ring with stock that is **1.5mm** thick, you will start with a piece of material that is **57.15mm + 3.0mm** (Circumference for a size 8 + 3.0mm) or **60.15mm long**.
